

Hearing Loss

Noise is not a new hazard.

Every year, over 50 million people in North America are occupationally exposed to hazardous noise. Fortunately, the incidence of noise-induced hearing loss can be reduced.

Follow These Simple Steps

- Workers are to be trained in a hearing loss program.
- A critical noise study should be performed at the jobsite.
- Engineering and/or administrative noise controls should be implemented.
- Use proper hearing protection when other measures are not enough.
